

"SEAL SAVER"* APPLICATION UPDATE

*PATENTED

User/Company: Key Construction Company - Jackson, MS
Machine: CAT 320 Excavator
Application: Bucket and Crowd cylinders

Key Construction Company, one of the largest bridge construction companies in Mississippi, was tired of the never-ending cycle of damaged cylinder rods and leaking seals. When the local Caterpillar dealer (Puckett Machinery Company) introduced them to "SEAL SAVER"* protective cylinder cover, they immediately saw the product's potential. They purchased one to test on the CAT 320BL bucket cylinder (shown above). They evaluated the product for approximately six months and then proceeded to protect the rest of their fleet. Key Construction Company will not just realize extended cylinder life with less downtime, but they will also be stopping the intrusion of dirt into their hydraulic system via the rod wipers. Keeping this contamination out of their systems will not only give them a longer filter life, but it will also prolong the life of the valves and pumps. As most people know, contamination is responsible for 70% of hydraulic component failures.

This *patented product is being utilized in all types of industries throughout the United States and in over 20 countries around the world.

THE "SEAL SAVER" PROTECTIVE CYLINDER COVER - TAKING PREVENTATIVE MAINTENANCE TO A NEW LEVEL
